

Floorsafe Aussie safety stair nosing for Washington DC

It's great to see an Australian safety product has been selected to make the 270 steps at the UAE Embassy in Washington DC safe.

Adelaide national anti-slip safety supply company Floorsafe International was requested to send six designs from their range of aluminium stair nosings to the UAE embassy in Washington DC for consideration.

Philip Zagni, proprietor of the company, felt confident that when they saw the designs & the quality of his products there was a good opportunity that one would be chosen.

Philip says, "Our R-KZ clear anodised stair nosing was finally selected and an order placed for immediate delivery.

"As a small family business one of our key advantages is that we are able to offer all clients a no - waste cutting service which means we cut all lengths to the required sizes at no additional cost.

"Our complete range of stair nosings are anodised to 10um and supplied complete with countersunk holes & double sided tape to hold in position the PVC Nitright insert.

"Over the years we have supplied our safety products to a large number of overseas countries. Our Safety Tread anti-slip metal coated nosings and ladder rungs are currently being used by Esso & Shell for making their off-shore rigs safe.

"We are thrilled to think that we as an Australian company can produce quality and value for money safety products and be competitive against other companies around the world."

Floorsafe's range of stair nosings and other safety products can be seen at www.floorsafe.com.au.

Floorsafe products are available throughout Australia, New Zealand, Malaysia, Brunei, Thailand, Philippines, Indonesia, Taiwan, Nigeria, Japan & Hong Kong.
