## **PermaStripe® application instructions**

***If you are using PermaStripe with the automated application machine please refer to the specific instructions that come with the applicator.***

PermaStripe is the ultimate aisle marking system; it comes in a huge variety of colours, widths and shapes. Once applied correctly it will always provide a marking system that is;

- ✓ Durable
- ✓ Visible
- ✓ Effective

### **1). Material storage**

Always ensure that material is kept in dry, warm conditions in the original protective packaging.

### **2). Surface preparation**

A clean, dry surface is essential. If there is grease/oil present we recommend an IPA cleaner, but other cleaners are acceptable. Prepared surface should be above 10°C.

### **3). Porous surface sealing**

If applying to a surface that may be susceptible to water retention we recommend sealing it prior to application to prevent water attacking the adhesive. Toluene based primers are ideal, we recommend our own product for this job. Apply a thin coat to the cleaned surface using a paint surface, then leave to dry.

### **4). PermaStripe application**

Peel back part of the red release liner then press the adhesive firmly onto the prepared surface and slowly keep peeling back the liner while applying the tape.

### **5). Finish!**

Once applied, press tape down using even pressure. If correctly applied, the new PermaStripe can be walked on straight away, though you will get maximum benefit from the adhesive system after 48 hours.
